

## HOW MUCH POWER DO I NEED?

While we agree that traditional standby generators are great additions to your home (we even sell and install them), we recognize that the cost can be very high, easily costing as much as \$10,000 - \$15,000 by the time they are installed. **For as low as \$2,395 we can also install a portable generator that provide enough backup power for all your critical electric needs**, including heat to keep you and your water pipes from freezing. If you're able to spend a little bit more we can provide enough power for your entire home, including appliances, heat, and AC with a portable generator capable of running on gasoline, propane, or natural gas with the switch of a button.

**Power the Essentials**
